DETAILED ACTION

Specification

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: Claim 8 recites the limitation "said display" in 1. There is insufficient antecedent basis for this limitation in the claim.
2. The following rejections are based on the best understanding of the claimed limitations.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1,3-10 and 12-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Jones et al. (U.S. Patent Number 4,388,692).

Jones et al. disclose a programmable digital thermostat having variable threshold hysteresis with time for controlling heating and cooling systems. Referring to Figs.6-8, the device comprises display 61, mode switch 66, processor 71, sensor 74 and keyboard 62.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uptegraph (U.S. Patent Number 5,673,850) in view of Hyltin et al. (U.S. Patent Number 4,264,034) and Truong et al. (U.S. Patent Number 5,943,917).

Uptegraph discloses a programmable thermostat. Referring to Figs. 1-4, the device comprises an input device 2, memory device 7, display device 5, programming device 4, comparison device 8, temperature modifying device 6 and controller 3. Uptegraph discloses the invention substantially as claimed. Uptegraph discloses a rotatable controller and does not disclose linearly movable member. However, Uptegraph discloses a rotatable controller is shown in the Fig. 1, other equivalent devices will be apparent to those of ordinary skill in the art. Hyltin et al. and Truong et al. disclose linearly movable member to select the options in the same field of endeavor for the purpose of select setting. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the apparatus of Uptegraph with a linearly movable member in view of Hyltin et al. and Truong et al. so as to select options.
